

Faculty Technology Mentor

Offering technology training to faculty is one of Columbia State's priorities for accomplishing its strategic goals. Since we have more than one-hundred full-time and two-hundred part-time instructors, and only a part-time training staff, there is a need for Faculty Technology Mentors to provide additional support.

The Faculty Technology Mentoring Program is a peer-to-peer network of faculty ready to **provide technical support in the use of on-line course management tools, discipline specific software, and basic computer competencies**. Faculty Technology Mentors should have strong computer skills and be fluent on the applications they want to mentor in. They will be the first line of support to assist faculty in their respective divisions or assigned area with routine technology questions and problems. Mentors will assist faculty on an "as needed basis" throughout the year.

Responsibilities of a Faculty Technology Mentor
